

Cuyamaca College's CalWORKs Comparison Report
2021-2022
(October 2022)

Report Description

This report compares the demographics and outcomes of CalWORKs students with all other students at Cuyamaca College. This report includes a comparison of student demographics and various student outcomes, which are then disaggregated by race/ethnicity and gender. Note that this report includes enrollments that resulted in an excused withdrawal (EW) grade.

Key Findings

Compared to the college-wide, non-CalWORKs student population, the CalWORKs program served a larger proportion of:

- Female students
- Middle Eastern students
- White students
- Students seeking an associate degree without transfer

Among CalWORKs students, the following groups were underrepresented:

- Male students
- Latinx students
- Black students

Compared to student college-wide, non-CalWORKs student population, CalWORKs-participating students had higher rates of course retention and success as well as higher rates of fall-to-spring persistence. CalWORKs students were also more likely to enroll full-time in classes (12 or more units) and to have term GPAs of 3.0 or above.

Implications

To address underrepresentation among male students, Latinx students, and Black students, the program could consider engaging a recruitment effort focused on each of these student groups. This may include marketing materials that include representation from these groups as well as translation of critical documents into Spanish. Furthermore, the program could consider other outreach activities with partner organizations in the community as well as the other Cuyamaca College service areas to connect eligible students with CalWORKs support.
